Summary

Backend engineer with 3+ years on production **core banking and payments** systems in **Java, Spring Boot, and Apache Kafka** at FIS Global, serving **10M+ customers**. Scope spans account origination, transaction processing, and PIE / non-PIE investment-tax classification. Strongest on **scalable system design**, event-driven design, REST API contracts, and PostgreSQL performance; ships containerized services to **Kubernetes** on **Terraform**-managed infrastructure.

Technical Skills

Languages: Java 17, Java 21, Java 11, Java 8, SQL, TypeScript, JavaScript, C++
Backend & Data: Spring Boot, Spring Data JPA, Spring Security, Hibernate, REST APIs, Microservices, OpenAPI / Swagger, Concurrency, Apache Kafka, Redis, PostgreSQL, MySQL
Cloud & DevOps: Kubernetes (AKS), Docker, Helm, **Terraform**, Azure (AKS, Event Hubs, Service Bus), AWS (ECS Fargate, ALB, Route 53, CloudFront, CloudWatch, EC2, S3), Jenkins, GitHub Actions, CI/CD, Git, Maven, Flyway, Linux
Testing & Tooling: JUnit 5, Mockito, Integration Testing, Postman, Grafana, Code Review, Agile / Scrum
AI & LLM: GitHub Copilot, LLM Integration, Prompt Engineering, RAG (Retrieval-Augmented Generation), Vector Search

Professional Experience

FIS Global Sep 2023 – Present
Software Engineer I | Bengaluru, India

- Re-architected nightly batch processing into **Kafka** event-driven messaging across distributed services with idempotent consumers, retry topics, and dead-letter handling for **application resiliency** — failed records now recover in **minutes** instead of waiting for the next 24-hour window.
- Cut customer-profile read latency from **1s to 40ms (96%)** with a Redis read-through cache over customer and account reference data, using TTL plus event-driven invalidation so cached reads stay consistent with origination updates.
- Reduced p95 latency roughly **35%** on business-critical origination and transaction queries by redesigning PostgreSQL composite indexes and eliminating **N+1 query patterns** over tables spanning **5M+ records**.
- Implemented **PIE and non-PIE** investment-tax handling in account origination, classifying each account's tax treatment at creation, and enforced PII protection via field-level encryption and masking to meet audit and regulatory requirements.
- Designed REST APIs across internal origination and customer services and authored the team's validation, versioning, and error-contract standards — now the default for new services, with JUnit 5 / Mockito unit and integration tests gated in Jenkins CI.
- Use **GitHub Copilot** for **AI-assisted code generation**, unit test scaffolding, and documentation — validating every output through peer review, automated tests, and secure coding standards before merge.
- Deploy Spring Boot microservices as Docker containers to **Kubernetes (Azure AKS)** via Helm charts over infrastructure managed with **Terraform**, released through Jenkins CI/CD.
- Built self-service tooling to trace, replay, and reconcile stalled **Kafka** events across onboarding, origination, and transaction flows, and fixed the underlying consumer and idempotency defects — cutting repeat production incidents **30%** and removing ~**150 engineer-hours/year** of manual recovery work for the team.

HighRadius Jan 2022 – Apr 2022
Software Developer Intern | *Remote*

- Built a full-stack Invoice Management System (React, Java, JDBC, MySQL) over **10K+ invoice records** — REST CRUD plus server-side search, filtering, and pagination — cutting lookup time **40%**.

Projects

Atlas — Travel Magazine Publishing Platform Sep 2026 – Present
TypeScript / React / Express / PostgreSQL / Docker / OAuth2 / JWT / Stripe | ouratlas.co.in

- Shipped and operate a live subscription product — Google **OAuth2**, server-verified **JWT** sessions, PostgreSQL **row-level security**, and paid entitlement granted only by a signature-verified **Stripe** webhook, over an append-only ledger that tolerates unordered delivery.
- Built a streaming **LLM** integration (Anthropic / OpenAI) with document chunking, and deployed to AWS — containerized API on ECS Fargate behind an Application Load Balancer with Route 53 DNS and ACM TLS, SPA served from S3 via CloudFront, secrets in Secrets Manager and CloudWatch logs — images published to ECR by GitHub Actions.

Education

SRM Institute of Science & Technology, KTR — Chennai, India Jul 2019 – Jun 2023
B.Tech, Computer Science & Engineering | GPA 9.20 / 10 | **500+ Data Structures & Algorithms** problems solved
Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP / OOPS), Operating Systems, Computer Networks, Database Management Systems (DBMS), Neural Networks

Achievements

- Built an AI workflow automating Wiki release documentation, cutting it from **2–3 days to under an hour** — advanced to **stage 2, FIS Global company-wide hackathon (2026)**.
- **Regional Generative AI hackathon (2025):** built an LLM + RAG pipeline with vector search over defect and log history to auto-classify defects and surface root causes.
